

ASI Automation Group

The ASI Automation Group (AG) provides complete Control Integration & Systems

Our engineers work with the latest versions of mechanical and electrical design software to optimize the configuration and size of your system. These capabilities, coupled with our expert assembly team, allow us to feel confident that we will build you the most energy, space, and cost effective system available for your application.

We can provide complete custom control panel systems to meet your requirements. Or we can assist your team with any stage of your internal process — from design and engineering to programming and fabrication.

Commissioning services for the following items are also available:

- PLC Panels
- Variable Speed Drives
- Operator Consoles/HMI Panels
- Motion Control Upgrades
- Component Integration, and
- Motor Controls

Design - Engineer - Build

Fabrication - Machining
