

CUSTOM
ENGINEERED
EQUIPMENT
SOLUTIONS

Americhem Systems, Inc. is a custom engineered, modular equipment fabricator located just outside of Chicago, Illinois. We've been in business 30+ years and have supplied equipment to some of the largest companies in the world. We pride ourselves on becoming the supplier of choice for corrosion resistant, custom engineered, process equipment.

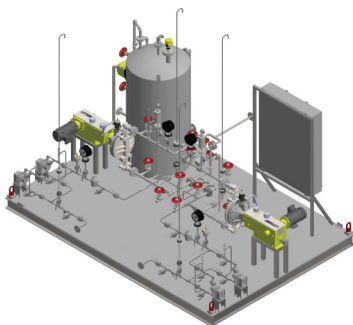

SOLUTIONS

We serve specific markets by working exclusively with piping and components of corrosion resistant materials. The design, engineering, drafting, welding, fabrication, and testing of our products are all done in-house. We follow all industry applicable standards in ASME, AWS, API, UL, NEC, and NFPA.

CHEMICAL FEED SYSTEMS

From strong acids to bases to proprietary chemistries, our chemical feed systems are custom-designed and fabricated specifically for any application. These packaged units are fabricated from corrosion-resistant materials by our certified fabricators, welders, and electricians. These units are fully tested in our facility for minimal installation time at the site.

Boiler Treatment Chemical Injection Package

Low-pressure, neat-feed chemical metering pumps and high-pressure injection pumps mounted on a common base frame.

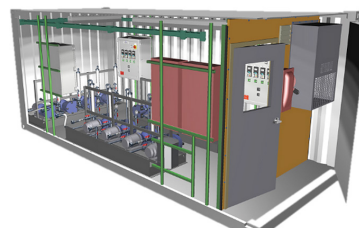

Chemical Feed System with Integral Tote

Duplex chemical injection pump system with integrated permanent base tote and removable re-fill tote.

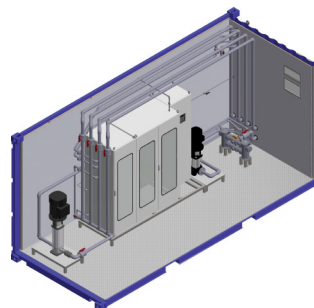

CONTAINERIZED SYSTEMS

If you need to demonstrate an application or are in need of moving the system around a site, a pre-fabricated containerized package is the perfect solution. Modified from standard shipping containers, these packages are outfitted with insulated walls, LED lighting, and HVAC systems making them a perfect plug-and-play module for your site.

Chemical Feed System Container

Standard 20' equipment container outfitted with chemical feed equipment, control panels, lighting, HVAC, and access door.

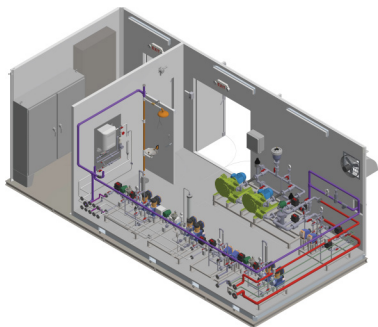

Water Treatment Equipment Container

High Cube 20' equipment container outfitted with pre-fabricated water treatment equipment, power distribution, lighting, HVAC, and access door.

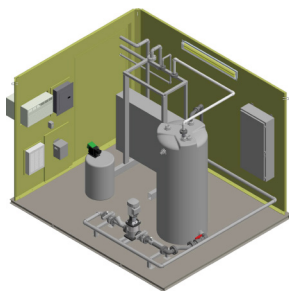

CUSTOM EQUIPMENT ENCLOSURES

Custom fiberglass equipment enclosures are designed for housing equipment where the space inside of a building [at the site] is limited. These enclosures are corrosion-resistant and designed to withstand harsh environments. Packages can be built to any size, to house any of our custom-fabricated equipment, making them the perfect extension to the existing facility.

Cooling Tower Water Treatment Building

Fiberglass shelter with multiple chemical feed systems and separate control room for electrical equipment.

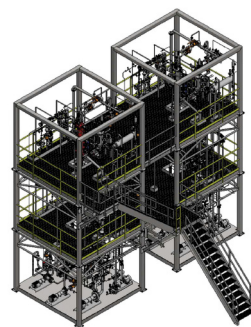

Reverse Osmosis Water Treatment Building

Compact fiberglass structure outfitted with RO equipment, power distribution, lighting, heater, and access door.

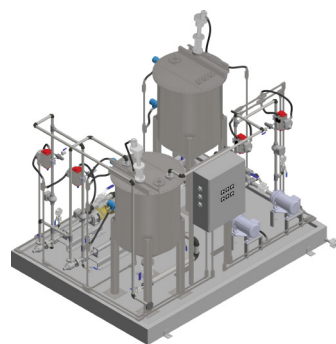

CUSTOM PROCESS SYSTEMS

With ASI's custom process systems, we solve problems where standard equipment solutions will not work. Whether these are batch processes, mixing solutions, or custom test stands — our systems are engineered to work with your process and the space in your existing facility. Typically controlled with a PLC, these process systems operate independently and remotely with data transmission back to the plant control system.

Bioreactor Pilot Plant

3-Story, 2-Tower pilot plant with ASME-code reactor vessels, welded 316SS piping and 316SS tubing.

Custom Batch Mix Tank System

Pre-packaged equipment system for batch mixing of chemicals, and progressive cavity metering pumps for distribution of blended product.

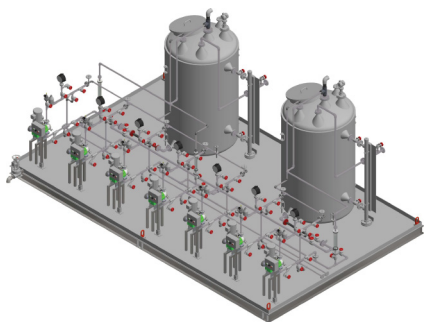

INTEGRATED TANK PACKAGES

There are many different options for storage tanks and vessels depending on the chemical being stored and the location of the installation. The ASI engineering team will work with you to select the proper tank for the application. Also included in these packages are vents, relief valves, level instruments, dryers, fill lines, and drain connections.

Caustic Chemical Feed System

Duplex 50% sodium hydroxide feed system with API-675 diaphragm metering pumps and two API-650 storage tanks with interconnecting piping.

Coagulant Chemical Injection Package

Seven-pump chemical injection system with two fiberglass storage tanks integrally mounted and piped on a common base frame.

INDUSTRIES WE SERVE

Refineries + Offshore Applications

Industrial Application

Hydrocarbon / Petrochemical

Paper Mills

Chemical Plants

Steel Manufacturing

Water / Wastewater Treatment

Heavy Industry

Electric + Generating Plants

Fossil

Gas Fired

Coal Fired

Oil Fired

IGCC

Nuclear

Renewables

Whatever your challenge,
ASI creates unique solutions.
